

Emergency Preparedness Automated External Defibrillators ZOLL AED Plus

Issue: A victim of sudden cardiac arrest (SCA) is in immediate need of an automated external defibrillator (AED) to help save their life. For every minute without CPR or defibrillation, the chance of survival decreases 10%. The chances of survival become slim after 10 minutes without treatment.

Application: AEDs are used in any public place or in locations where EMS service is not immediately available. Usually seen in airports, schools, healthclubs, workplace, and police cars, AEDs are becoming more prevalent with more states now issuing AED mandates. Implementing an AED program requires an emergency response team that is both AED and CPR certified. Medical direction from a physician is also required when setting up an AED program and the scope of what is required varies from state to state. Medical direction through En-Pro is included with every ZOLL AED Plus purchase from Grainger.

Through En-Pro, ZOLL provides a turnkey AED management program that ensures the quality and compliance of your AED Program. En-Pro will design, implement and maintain your AED program with the PlusTrac™ AED tracking system. PlusTrac is a web-based service that provides real-time reporting on the status of your AED program which includes tracking: routine maintenance inspections, electrode pad expiration, battery expiration and volunteer responder certification. PlusTrac is an optional service available for purchase for one year or five years.

Recommendation: ZOLL's AED Plus® is the first and only Full-Rescue AED with Real CPR Help®, providing rate and depth of chest compressions during CPR. It is the only AED with complete support for the Chain of Survival and has the lowest total cost of ownership.

The AED Plus is the first and only Full-Rescue AED designed for infrequent rescuers.

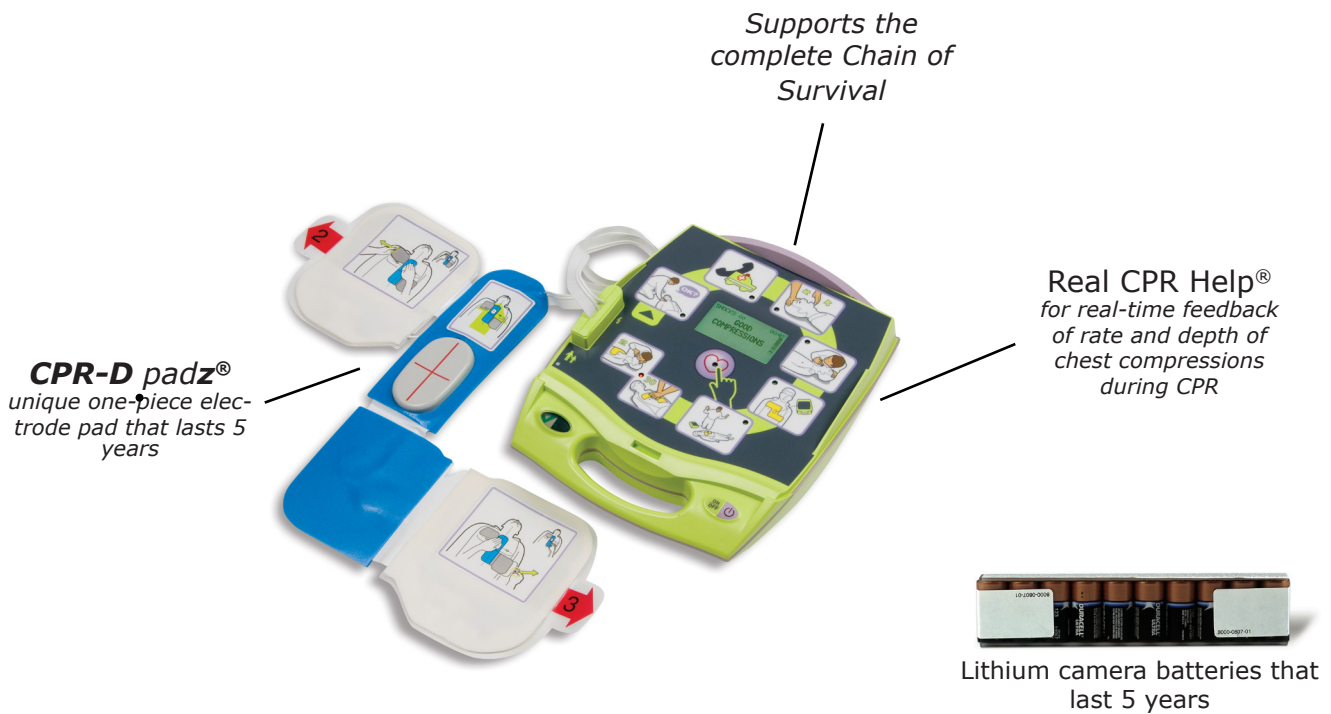

With Real CPR Help, voice and visual prompts, and a one-piece electrode, the AED Plus is the only AED that can help assess and treat nearly every sudden cardiac arrest victim.

Product Features & Benefits:

<p>Real CPR Help</p> <ul style="list-style-type: none"> • Can see what you're doing during CPR • Real-time feedback for rate and depth of chest compressions
<p>Supports the complete Chain of Survival</p> <ul style="list-style-type: none"> • Guides the rescuer through every step in a SCA rescue • From "check responsiveness" through chest compressions • Only AED with complete support
<p>Offers a one piece electrode pad</p> <ul style="list-style-type: none"> • Patented one-piece CPR-D•padz® • Lasts five years • Simplifies positioning and eliminates delays
<p>Powered by Lithium camera batteries</p> <ul style="list-style-type: none"> • Lasts five years • Available for purchase at retail stores • Redundant battery circuitry
