

# Roll Pin Punch

*Precision machined Roll Pin Punches are specifically designed to remove spring/roll pins. The heat treated point has a rounded nib to center the point into the pin allowing the point shoulder to maintain maximum contact with the pin during removal. The punch shaft allows for a long, straight removal of the pin without damaging the pin wall material. DASCO PRO offers a range of punch point sizes to accurately fit the pin size to be removed. All Roll Pin Punches are made of high strength steel for years of reliable, durable service.*
