

10-26

Flooring Installation Kit

TAILORED FOR RETAIL
Full color retail-friendly display box

DO-IT YOURSELF

DURABLE
Tapping block evenly distributes forces from hammer when tapping planks together

INTERLOCKING
Spacers used against wall to provide even expansion space

FLARED
Wide angle pull bar is designed to pull planks together in tight areas

As the laminate and hardwood flooring market continues to expand, Roberts has developed an entry level Flooring Installation Kit created for the Do-It-Yourself Installer. The kit comes complete with a hard plastic tapping block, a wide angle pull bar and 30 spacers; the 3 essential tools for installing glue or glueless laminate and hardwood flooring.

Each spacer is 1/4" wide at its widest point, and by placing two or more spacers together it is possible to adjust the amount of expansion space up to 9/16" by simply adding another spacer. The spacers have "serrated" edges that lock them into the correct position once a board is placed against them. The pull bar is designed with a wide angle end for better force distribution when pulling planks together on the ends of the flooring when there is no room for a tapping block.

The Roberts 10-26 is a great DIY Flooring Installation Kit to get your customer started.

Quality & Excellence Since 1938.
