

Fiskars axes are crafted with a proprietary grinding technique that provides a sharper edge for better contact and cleaner cuts. They also stay sharp longer and include low-friction coating.

Perfected weight distribution provides an optimal power-to-weight ratio that increases swing speed to multiply power, much like an aluminum baseball bat.

With stronger-than-steel FiberComp™ handles and inseparable insert-molded heads, our axes don't just outlast others — they're virtually impossible to break.

Fiskars® products are backed by a lifetime warranty.
