

Anthes WEATHERCAPS®

Vertical Exhaust Stack Protection
from Dirt, Weather and Insects

BE AWARE OF THE DANGERS AND RISKS OF AN OPEN VERTICAL EXHAUST STACK.

- **Reduced engine performance.**
- **Income loss due to equipment down time.**
- **Repair expenses.**
- **Unplanned work rescheduling.**

Today's more efficient engines are also more complex and costly to repair. The installation of Weathercaps on all your trucks, off-road and service equipment with vertical exhaust stacks protects them at a fraction of the cost of unwanted repairs.

Available in over twenty sizes in various finishes. An exclusive Lock-Bar security option is available on select models. See reverse for specifications and details.

Only Weathercap® offers these features:

- There is an engineered Weathercap size for each stack diameter. Over 20 different sizes to choose from. Fit vertical exhaust stacks from 1" to 7¹⁵/₁₆" O.D.
- Easy installation. Simply position and tighten one bolt. No holes to drill. No clamps needed.
- Weathercap's proven design opens to full vertical position. The slightest pressure inside the stack operates Weathercap so engine breathes freely.
- Closes instantly when exhaust pressure stops. Proper counter-balancing and high hinge point, allow Weathercap to close tightly even in abnormal parking angles.

Tin cans or other temporary devices do not provide adequate protection for expensive equipment. Weathercap protection is a minimal expense for preventive maintenance compared to costly equipment down time.

Use only ORIGINAL Weathercaps.®

Don't depend on substitutes.
