## Fox & Hound Premium Tone & Probe Kit

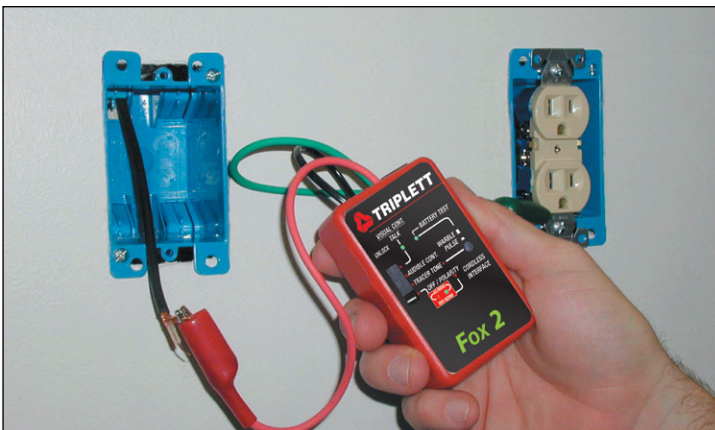

### Premium Tone & Probe Kit **55EF35**

The Fox & Hound Wire Tracing Kit's portable design allows you to trace wires whenever needed. Find non energized wires in walls, ceilings, and floors. Inductive tracer with two probes indicates magnetic fields with audio and visual signals. Tracer filter helps suppress 60 Hz and high-frequency noise and the Tone Generator provides three tones for guiding the tracer to wires.

The Fox 2 multi-function Toner, generates multiple tones (Pulse or Warble), performs basic telephone line tests (loop mA, line polarity, and ringing voltage). Visual and audible continuity test, and integrates our own True Trace and TripLatch tests while providing overload protection up to 120 VAC.

The HotWire's RF signal can be sensed through most building materials (wood, plaster, drywall, concrete, brick), and can often be sensed through metal conduit (because the conduit is often poorly grounded, as far as RF is concerned).

The Hound 3 Probe has a thumb wheel Sensitivity control and Signal Strength indicator LED. It's built-in LED headlights illuminate dark areas and reduce fluorescent light noise. A bandpass filter suppresses unwanted frequencies and includes an earphone jack for noisy or quiet work areas.

Order: **55EF35** Fox & Hound Hotwire (3399)
