

MULTI-SOCKET

UNIVERSAL QUICK DISCONNECT

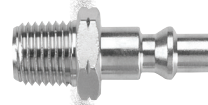

CORROSION RESISTANT

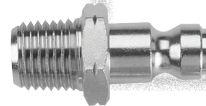

The body of the **MULTI-SOCKET** is manufactured from corrosion resistant nickel plated brass with stainless steel locking balls and springs. What does all this mean to you? No leaks, no rust, no corrosion, and most importantly a long-lasting coupler with a reliable connection every time.

UNIVERSAL CONNECTION

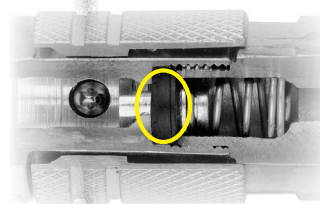

Simplify the world of quick disconnect couplers with the **ALPHA MULTI-SOCKET**.

One coupler that works with the most commonly used plugs without leaking. ARO Plug, Tru-Flate Plug, Industrial Plug; Automatic universal connection without leaking.

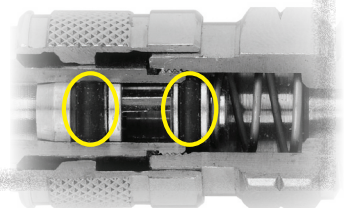

MULTI-SOCKET
ONE COUPLER... ONLY SOLUTION

SUPERIOR SEALING

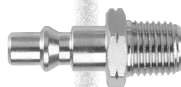

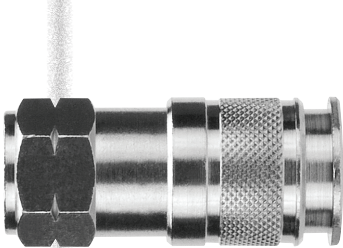

Most couplers only seal with a single o-ring or seal. Using this type of design is very easy for the seal to separate from the body of the coupler causing leakage. Not the **ALPHA MULTI-SOCKET**. Our dual captured seal design prevents

seal separation as well as compensates for minor plug degradation providing superior sealing over other couplers on the market
