

19BPA, 19SCA & 19SPA Series Inline Screwdrivers

19SPA

19SCA

For this Instruction Manual

This Instruction Manual is the Original Instruction Manual intended for all persons who will operate and maintain these tools.

This Instruction Manual

- provides important notes for the safe and efficient use of these tools.
- describes the function and operation of the 19B and 19S series tools.
- serves as a reference guide for technical data, service intervals and spare parts ordering.
- provides information on optional equipment.

Identification text:

19B / 19S represents all models of the inline pneumatic screwdriver as described in this manual

→ indicates a required action

• indicates a list

<.> indicates a reference number from the exploded parts drawings

Arial indicates an important feature or instruction written in **Arial Bold**

Identification graphic:

→ indicates a directional movement

↓ indicates a function or force

Copyright protection:

1 Safety

1.1 Warnings and notes

Warning notes are identified by a signal word and a pictogram.

- The signal word indicates the severity and probability of the impending danger.
- The pictogram indicates the type of danger.

WARNING!

WARNING identifies a potentially **hazardous** situation which, if not avoided, may result in serious injury.

CAUTION!

CAUTION identifies a potentially **hazardous** situation which, if not avoided, may result in minor or moderate injury or property and environmental damage.

NOTE

NOTE identifies general information which may include application tips or useful information but no hazardous situations.

Important information that must be read and understood by all personnel installing, operating or maintaining this equipment.

1.2 Basic requirements for safe working practices

All personnel involved with the installation, operation or maintenance of these tools must read and understand all safety instructions contained in this manual. Failure to comply with these instructions could result in serious injury or property damage.

These safety instructions are not intended to be all inclusive. Study and comply with all applicable National, State and Local regulations.

CAUTION! Work Area:

- Ensure there is enough space in the work area.
- Keep the work area clean.
- Keep the work area well ventilated.

Personnel Safety:

- Inspect the air supply hoses and fittings. Do not use damaged, frayed or deteriorated hoses.
- Make sure the air supply hose is securely attached to the tool.
- Ensure a secure standing position and maintain balance.
- Make sure the throttle is positioned relative to the head so the throttle will not become wedged against an adjacent object in the ON position due to torque reaction.
- If the tool is to be reversed, locate the throttle in a neutral position to prevent entrapment.
- Keep the tool clean and dry to provide the best possible grip.
- Firmly grasp the handle of the 19B/19S and apply the socket or bit to the application before starting.
- Be prepared for high short-term reaction torques.

Safety working with and around fastening tools:

- Use only power tool sockets and bits available from Apex Tool Group.
 - Inspect socket or bit for visible damage and cracks. Replace damaged items immediately.
 - Disconnect the air supply before installing or replacing the socket or bit.
 - Do not attach the socket or bit at a slant.
 - Make sure the socket or bit is fully assembled on the drive and locked in position.
-

1.3 Operator training

All personnel must be properly trained before operating the 19B/19S tools. The 19B/19S tools are to be repaired by fully trained personnel only.

1.4 Personal protective equipment

When working

- Wear eye protection to protect against flying metal splinters.
- Wear hearing protection

Danger of injury by being caught by moving equipment.

- Wear a hairnet
- Wear close fitting clothing
- Do not wear jewelry

1.5 Designated use

The 19B/19S are designed exclusively for fastening and releasing threaded fasteners.

The 19B/19S series screwdrivers are equipped with an adjustable Clecomatic clutch. The tool will shut off the instant the clutch reaches its adjustable preset torque. This action provides an accurate method of controlling torque without sacrificing tool speed.

- Do not modify the 19B/19S, any guard or accessory.
- Use only with accessory parts which are approved by the manufacturer.
- Do not use as a hammer, pry-bar or any other improper usage.

1.6 Codes and standards

It is mandatory that all national, state and local codes and standards be followed.

1.7 Noise and vibration

Noise level ≤ 70 dB(A) free speed (without load) according to ISO 12100: 2011

Vibration values < 2.5 m/s² according to ISO 12100: 2011

Scope of Supply, Transport and Storage**2 Scope of supply, transport and storage****2.1 Items supplied**

Check shipment for transit damage and ensure that all items have been supplied:

- 1 19B/19RS
- 1 PL12-1013EN instruction manual
- 1 Declaration of Conformity
- 1 Lubrication sheet
- 1 Warranty statement

2.2 Transport

Transport and store the 19B/19S in the original packaging. The packaging is recyclable.

2.3 Storage

For short term storage (less than 2 hours) and protection against damage:

- Place the 19B/19S in a location on the workbench to avoid accidental depression of the lever.
or
- Suspend the 19B/19S from a suitable balancer or tool positioner.

For storage longer than 2 hours:

- Disconnect the air supply from the 19B/19S

Object	Time Period	Storage Temperature
19B or 19S without air supply	No guideline	-13°F to 104°F (-25°C to 40°C)

3 Product description

3.1 General description

- Inline pneumatic powered screwdriver
- Lever push-to-start (19SCA), push-to-start (19BPA, 19SPA)
- Clockwise/counterclockwise rotation
- Adjustable Clecomatic clutch
- Low vibration level

3.2 Operation and functional elements

This section describes the operational and functional elements of the 19B/19S.

Ref.	Description
1	Air Inlet
2	Reversing Mechanism
3	Throttle Lever (Lever Push-to-Start Models)
4	Motor and Gearing
5	Clecomatic Clutch
6	Output Drive (Quick Change Chuck or Bit and Finder)

4 Accessories

Non-Reversible Kit
Part Number: 207030

Torque Signal Kit
19SCA Clecomatic clutch models only
Part Number: 301106

Exhaust Overhose
Part Number: 207019

TVP-100 Series Torque Verifier
Part Number:
TVP-110-15-U (115VAC) EN
TVP-110-30-U (230 VAC) EN

5 Before initial operation

5.1 Ambient conditions

Ambient temperature: 41°F (5°C) to a maximum of 104°F (40°C)

Acceptable relative humidity: 25% to 90%, non-condensing

5.2 Air supply

Parameter	Description
Air Hose	Minimum inside diameter: 3/16" (4,7 mm) Maximum length: 16.4' (5 m)
Working pressure range	58 to 101.5 psi (400 to 700 kPa) Recommended: 90 psi (620 kPa)
Compressed air	Air quality according to ISO 8573-1, quality class 2.4.3 The compressed air must be clean and dry.

NOTE

To attain consistent results, maintain a constant working pressure using a suitable air line unit consisting of a filter, regulator and lubricator.

- The inside diameter of the air hose must be free of residue, clean if necessary.
- Spray a few drops of light air tool oil into the air inlet adapter.
- Adjust the lubricator to a minimum setting to reduce the amount of excess oil in the exhaust air.

Oil identification

Part No.	Packaged	Designation	Vendor
540397	1 Quart (0.94 liter)	Airlube 10W/NR-420LB DR	Fuchs Lubricants Co.
533485	1 US Gallon (3.78 liter)	Airlube 10W/NR-420LB DR	Fuchs Lubricants Co.

5.3 Connecting the air supply to the tool

WARNING!

The air hose can disconnect from the tool by itself and whip around uncontrollably.

- Turn off the compressed air before connecting to the tool.
- Securely connect the air hose to the tool.
- Turn on the compressed air.

5.4 Tool set up

The tool must be configured for the application.

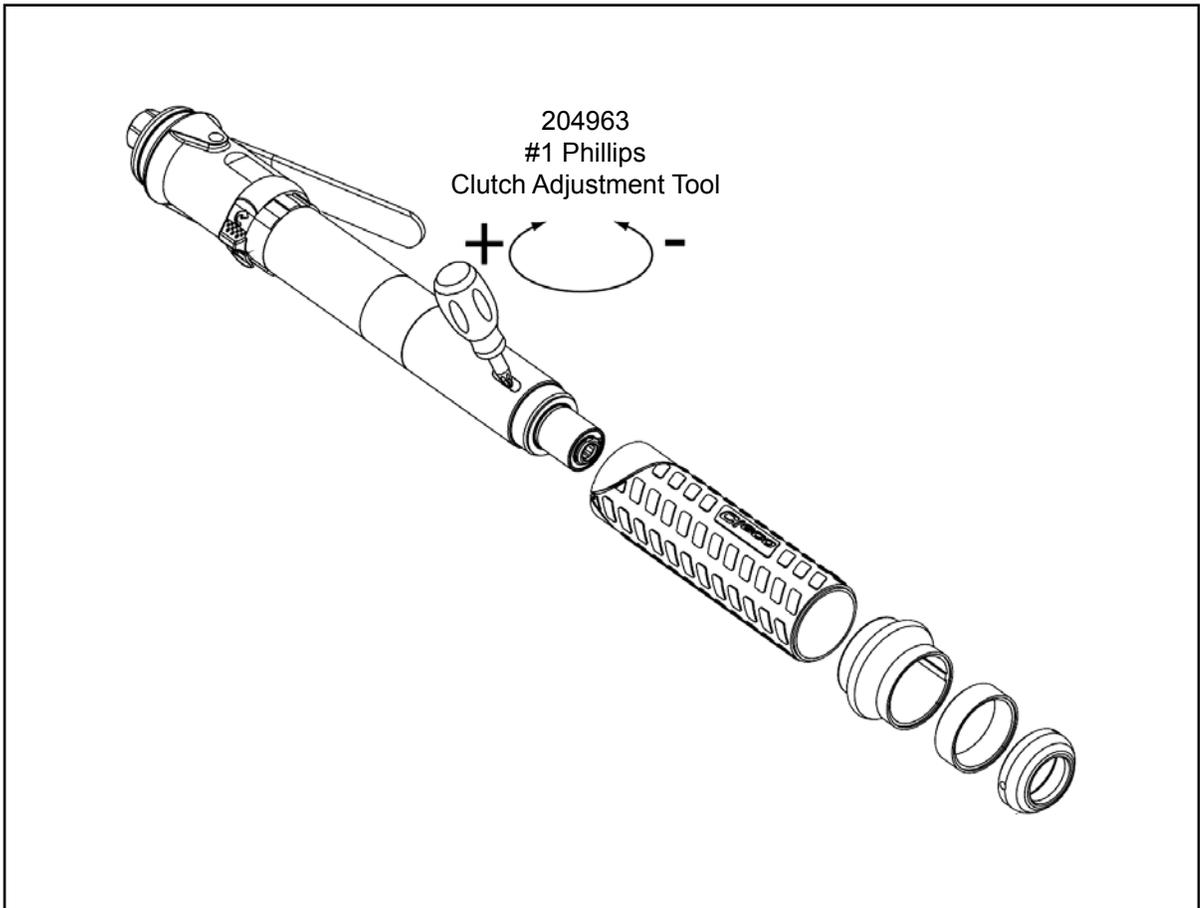

5.4.1 Setting the torque

CAUTION!

Danger of injury from accidental start up.
Turn off the compressed air before adjusting the clutch.

→ Using the clutch adjustment tool provided, turn clockwise for maximum torque or counter-clockwise for minimum torque.

Note: For best results, start from minimum torque and adjust in the maximum direction until desired torque is achieved.

6 First operation

6.1 Putting into use

- Make sure the air supply is securely attached and the compressor is turned on.
- Make sure the reverse ring or button is in the correct position.
- Place the socket or bit on the application and depress push the tool to start the rundown
- When the tool shuts off after reaching the set torque, release the pressure on the tool.
- Remove the tool from the application.

7 Troubleshooting

Malfunction	Possible causes	Remedy
Tool does not start	No or low air pressure	→ Make sure there is adequate air pressure at the tool air inlet
	Reversing ring out of position	→ Make sure the reversing ring is in the clockwise or counterclockwise position
	Trip rod spring out of position	→ Tool disassembly required
	Broken gears	→ Tool disassembly required (parts replacement)
Tool does not shut off	Torque set to high	→ Reduce the torque setting
	Working pressure < 58 psi (400 kPa)	→ Increase the working air pressure
Unable to adjust torque	Teeth on adjusting wrench worn or broken	→ Replace adjusting wrench
	Teeth on adjustment nut worn or broken	→ Clutch disassembly required (parts replacement)
Tool loses power	Reduced air pressure	→ Check air supply line for any obstructions
	Lack of lubrication	→ Check the air line lubricator to make sure it is full of lubricant and is working properly
	Motor exhaust air is obstructed	→ Clean or replace bronze mufflers
	Swollen rotor blades from excessive moisture	→ Check the air line filter, empty reservoir if necessary
	Worn rotor blades	→ Tool disassembly required (parts replacement)
	Worn gears or bearings	→ Tool disassembly required (parts replacement)
Air leak at inlet adapter	Loose inlet adapter	→ Tighten inlet adapter
	Worn o-ring on inlet adapter	→ Replace o-ring

8 Maintenance

CAUTION!

Danger of injury from accidental start up.
Turn off the compressed air before performing any maintenance.

8.1 Service schedule

Only qualified and trained personnel are permitted to perform maintenance on these tools.

Regular maintenance reduces operating faults, repair costs and downtime. In addition to the following service schedule, implement a safety related maintenance program that takes the local regulations for repair and maintenance for all operating phases of the tool into account.

Maintenance Interval	Rundowns	Designation
Daily	Daily	<ul style="list-style-type: none"> → Visual inspection of air supply hose and connections → Inspect airline filter, regulator and lubricator for proper operation → Check the tool excessive vibration or unusual noises → Visual inspection of all external components of the tool
W1	100,000	<ul style="list-style-type: none"> → Inspect the air hose for damage or wear → inspect the square drive output spindle for damage or wear → Inspect the air inlet adapter for a secure fit → Check the maximum free speed
W2	500,000	<ul style="list-style-type: none"> → Check individual parts and replace if necessary → Replace O-rings and seals → Clean bronze mufflers
W3	1,000,000	<ul style="list-style-type: none"> → Check individual parts and replace if necessary → Throttle valve → Motor → Gearing → Clutch

This maintenance schedule uses values that are valid for most applications. For a specific maintenance interval, refer to 8.1.1 Calculating a customer-specific maintenance plan.

8.1.1 Calculating a customer specific maintenance plan

A service interval W(1, 2, 3) depends on the following factors:

Factor	Value assumed in "Service Schedule"	Description
V	V1 = 100,000 V2 = 500,000 V3 = 1,000,000	Number of rundowns after a maintenance measure is prescribed by Apex Tool Group.
T1	1.8 seconds	Specific rundown time, measured in life and endurance tests.
T2	2 seconds	Actual rundown time, depending on the hardness of the joint.
S	1; 2; 3	Number of shifts per day.
VS	750	Number of rundowns per shift.

T2, S and VS are variable factors and can differ depending on the specific application.

Example for service interval W2:

After 500,000 rundowns (V),
a specific rundown time of 1.8 seconds (T1)
with an actual fastening time of 3 seconds (soft joint) and
3 completed shifts per day and 750 rundowns per shift.

$$W(1, 2, 3) = \frac{V \times T1}{T2 \times S \times VS} \qquad W2 = \frac{500000 \times 1.8}{3 \times 3 \times 750} = 133 \text{ (days)}$$

You will need to perform the maintenance indicated as W2 after an operating time of 133 days.)

8.2 Lubricants

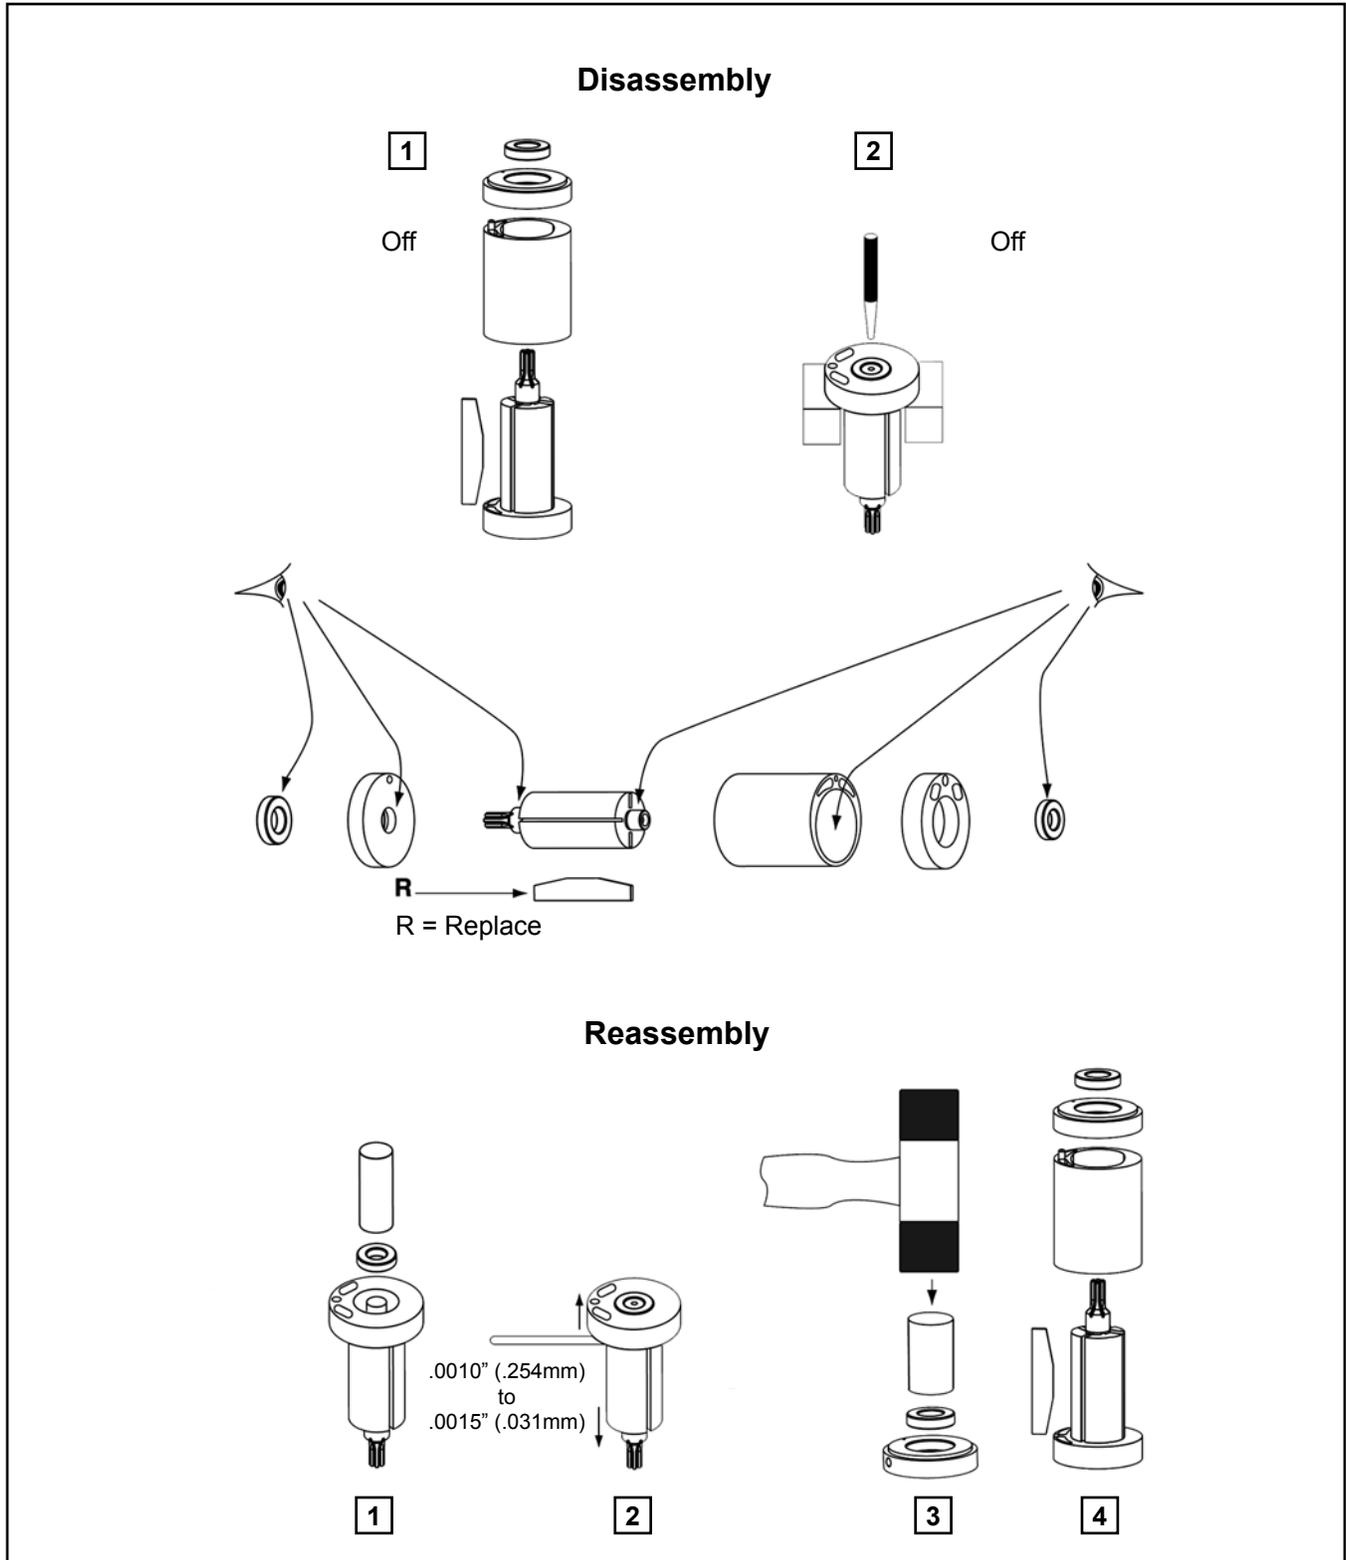

For proper function and long service life, use of the correct grease is essential.

Grease lubricants recommended for this tool.

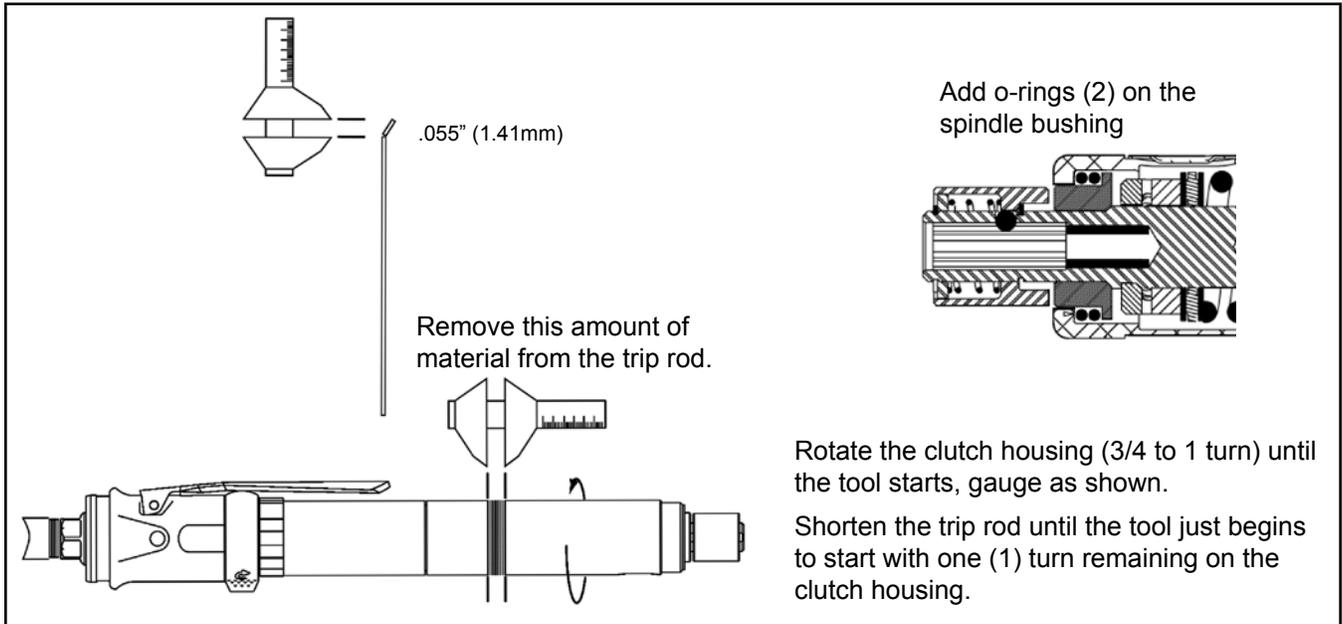

Part No.	Packaged	Designation	Vendor
540450	18 oz. (0.51 kg)	Black Pearl EP-NLGI-0	Chevron
540395	2 oz. (0.06 kg)	Magnalube-G	Carleton-Stuart Corp.
513156	16 oz. (0.45 kg)	Magnalube-G	Carleton-Stuart Corp.
541444	2 oz. (0.06 kg)	Rheolube 363AX-1	Nye Lubricants, Inc.
541445	16 oz. (0.45 kg)	Rheolube 363AX-1	Nye Lubricants, Inc.

12 Service

12.1 Replacement parts

Use only original Cleco replacement parts. Failure to comply can result in reduced power and increased service requirements. The tool warranty may be voided if replacement parts are not manufactured or approved by Apex Tool Group.

12.2 Tool repairs

Only qualified and trained personnel are to repair this equipment.

12.3 Warranty repairs

All warranty repairs are to be performed by an authorized Apex Tool Group service center. Contact your local representative for assistance with warranty repair claims.

13 Disposal

CAUTION!

Injuries and environmental damage from improper disposal.

Components and auxiliary materials of the tool pose risks to health and the environment.

- Capture auxiliary materials (oils, greases) when drained and dispose of them properly.
- Separate the packaging components and dispose of them properly.
- Comply with all applicable local regulations.

Observe local disposal guidelines for all components of this tool and its packaging.

Sales & Service Centers

Note: All locations may not service all products. Please contact the nearest Sales & Service Center for the appropriate facility to handle your service requirements.
