Instructions for
Loading Tools into the Tool Bag

The tools contained in this box are for the tool bag located in the handle of the FlexCart.   We have provided the tools to you separately from the bag because the process of loading them into the bag provides a valuable introduction to the FlexCart tool bag and the tools it carries.

Step 1: Empty the box:
Carefully empty the contents of the box onto a large table.

Step 2: Lay tools out on a table:
Remove each tool from its packaging and lay all of the unpackaged tools neatly on the table.

Step 3: Load tools into the pockets:
Pick any pocket on the inside of the bag, read the pocket label, locate that tool on the table and insert it into the pocket. Make sure to push the tool down into the pocket all the way. This will open up the pleat at the bottom of the pocket giving more room for the tool. Work your way around the inside of the bag until all of the pockets are full then do the same thing to fill the outside pockets.

The pictures below show the best way to insert each tool.

Step 4: Install the tool bag into the handle of the cart:

The tool bag should be installed into the handle of the cart with the blue handled tools facing you and the parts box on the left as shown below.
