

# Instructions for PIG® Grippy® Absorbent Mat

Patent Pending

1. Make sure the surface you want to cover is clean, dry and free of oil and debris before installing.
2. Place Grippy® Mat adhesive-side down on a horizontal or vertical surface. Press down along the edges and into the center of the mat until it is smooth, flat and securely in place with no air pockets or creases.
3. Grippy® Mat can be picked up and reapplied as long as the surface is clean and dry. When picking it up, pinch an edge under the Grippy® bottom to keep the top absorbent layer from pulling away.

**NOTE:** All adhesives have potential to lift finish coatings or paint depending on the condition of the surface. PIG® Grippy® Mat is formulated to work with most industrial floor surfaces, but testing a 6" square piece in a noncritical area can help you judge suitability for your use.

The stitching may begin to fray after an extended period of time or intense use. Fraying will not affect the absorbency or adhesion of the mat.

Product life will vary depending on the type of use, level of liquid saturation and the frequency and intensity of foot and vehicle traffic. Grippy® Mat is super tough, but it will eventually show wear. Inspect the product during use and replace when it is worn or saturated. You should replace the mat when the saturation level approaches the edges because liquid will seep out of the mat and migrate under the Grippy® backing.

**WARNING:** Used absorbents can take on the hazardous characteristics of liquids absorbed. Follow local, state and federal regulations when storing or disposing of used absorbents.

Grippy® Mat won't slide or bunch up, even when wheels roll over it.

Line your workbench and shelving to catch drips and spills; also protects the parts and equipment you're working on.

Protect your tools and toolbox drawers to keep them dry and organized with an absorbent liner that won't curl up or slide out of place.
