

SPARE SPIKE™

SPARE SPIKE™ All-Traction™ Footwear is an economical way to reduce slips and falls in winter conditions. SPARE SPIKE™ fits quickly and easily over all types of footwear and increases traction in ice and snow.

If your employees must walk periodically in slippery outdoor winter conditions, SPARE SPIKE™ is the ideal solution. Lightweight, compact and versatile, the SPARE SPIKE™ will help to greatly reduce the slips and falls in these conditions.

As it's name says, The SPARE SPIKE™ features a convenient extra replacement spike on the upper portion of the device. Accidentally losing a spike from the bottom of any traction device can be dangerous. The SPARE SPIKE's patent pending extra replacement spike ensures that you'll always have a few spares with you to ensure that your crews are always walking safely!

**Built-in
Extra Spike!**

The replaceability of the spikes is an important aspect for us, but if you don't have the replacement spikes with you are adding risk. The Spare Spike™ solved that problem. It's like a spare tire for your foot. We found the Spare Spike™ to be an economical and easy to use product for all of our winter walking activities.

Dual Pull Tab

Overcomes the deficiencies of the single pull-tab by allowing the user to grip the rear tabs with both hands in order to stretch and expand the device for the easiest on and off.

Patented Trim Line® Feature

This patented feature allows the user to permanently remove the rear spikes if exposure of a defined heel is a safety requirement.

Aggressive Tread

Features a deep and aggressive non-clogging tread pattern that provides complimentary traction to the spikes in thicker snow.

Replaceable Spikes / Spare Spike™

Losing a spike while walking or working can be like getting a flat tire. The spikes on the Spare Spike™ are not only 100% replaceable with no special tools needed, but each foot features a unique patent pending spare spike holding compartment. This ensures that the user will always have their spares with them for quick and easy replacement with no loss of safe walking.

1. Spike is missing from the sole
2. Remove the Spare Spike™ from the toe area
3. Replace the missing spike
