

# **Class 9001 Type KA Series J Contact Block**

## **New features for the Type KA contact block make a good thing even better**

Square D is proud to introduce the Class 9001 Type KA Series J contact block. These contact blocks meet the same requirements as the original Fingersafe™ contact blocks and offer the following features:

- Color coded for easy contact status identification
- Blocks are clear on terminal side for easy inspection
- Only one mounting screw to reduce installation time
- Retaining nib added to prevent rotation when contact blocks are stacked
- Available with an open T slot to accept a wide range of wire sizes
- Meets IEC 947.5.1, VDE 0106, UL Listed, and CSA certified
- +/- Terminal screws to reduce wiring time and accept power screwdrivers
- Meets requirements for both control and logic circuitry

# Type KA Series J Contact Block

---

With color coded contact blocks contact status identification is practically foolproof:

- ◆ Green — normally open
- ◆ Red — normally closed
- ◆ Clear — dual circuit

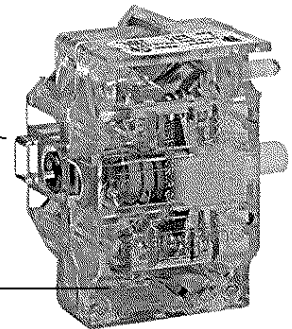

Open T slot for easier wiring

One mounting screw reduces wiring time

Mounting nib prevents rotation of stacked blocks

The case of the block is clear, allowing for easy inspection or proper contact operation and selector switch sequence.

---

The Series J Fingersafe contact blocks no longer have a webbed wire separator, but an open T slot that accepts fork tongue and Ferrule type cable ends/connectors. These contact blocks accept a wire range of #12-24 AWG. With a control circuit rating of 10 amps 600 VAC maximum and a logic circuit rating of 5 VDC, 1 mA minimum, one standard contact block can fulfill requirements for both control and logic circuitry.

Meets VDE 0106 (fingerproof) requirements for worldwide acceptance; also reduces the potential of accidental contact with live terminals.

UL Listed and CSA certified to meet all North American requirements.
