 LITHONIA LIGHTING®

Lithonia Lighting, the leader in industrial lighting, has delivered high-quality, reliable lighting solutions for 65 years. Building on that reputation, we are proud to expand our industrial striplight offering to include LED solutions. Based on the original Z Series fluorescent striplight design, the new **Z Series LED striplights** provide:

- » Longer life
- » Greater color uniformity
- » Superior performance in a wide range of ambient temperatures
- » Choice of lensed or unlensed fixture

ZL1

ZL2

Z Series LED Key Features

Simple installation:

- » Tool-less snap-on channel cover for easy wiring access
- » Internal pluggable wiring harness prevents wiring errors
- » 3-sided row-alignment clips for straighter, faster row assembly
- » Rigid, 6-bend channel provides additional strength to prevent bowing or twisting of the fixture

Available lengths:

- » 2'
- » 4'

Smart packaging:

- » Easy-open carton saves time by eliminating the need for a box cutter
- » No loose parts spill on the floor; all parts are shipped securely within the product

Mounting:

- » Surface-mount in any orientation to provide uplight or downlight
- » Suspended-mount with chain, aircraft cable or stem

Lumen packages:

- » 1400-6000 lumens available
- » Choice of 3000K, 3500K or 4000K color temperatures

Controls:

- » Photocontrols let you take advantage of natural daylight
- » Motion sensors save energy in unoccupied spaces

Finishes (post-painted):

- » White
- » Galvanized
- » Matte black
- » Smoke gray

Better Illumination

Color consistency:

Not all LED lighting manufacturers are created equal. Lithonia Lighting takes great pride in the fact that our fixtures offer incredible color consistency.

With the Z Series LED striplights, each LED is electronically and optically measured during fabrication to guarantee that the slightest color variance is undetectable by the human eye. The LED technology exceeds ANSI standards resulting in superior uniformity and a better lighting experience in your space.

Even distribution:

When mounted in a continuous row, fluorescent striplights create dark spots between fixtures while Z Series LED striplights provide a flawless look. The diagram below explains further.

Fluorescent striplights only distribute light downward while the Z Series LED striplights place light outward as well.

Fluorescent striplights have sockets at the end of each fixture that prevent light from projecting outward.

Z Series LED striplights offer wider light distribution and have no sockets to create dark spots between fixtures.

Cove is illuminated with **FLUORESCENT** striplights which create shadows between fixtures and a scalloped pattern on the wall.

Cove is illuminated with **Z SERIES LED** striplights providing a seamless transition between fixtures.

Fixture Life

Long-life, worry-free lighting.

Z Series LED striplights contain components selected for high performance. LED LM-80 test data predicts an L70 of more than 100,000 hours and an L86 of 60,000 hours. The fixtures are CSA Certified for dry and damp locations from -4°F (-20°C) to 86°F (30°C).

Controls

Increase energy savings and return on investment.

With 0-10V dimming down to 10% standard, and a bi-level option, reduce energy costs by dimming your lighting during off-peak hours. Z Series LED striplights are ideal for photocontrols and occupancy sensors so you can take advantage of natural daylight and unoccupied spaces.

The optional Sensor Switch low bay occupancy sensor may be mounted at the end of a row or anywhere along a continuous row. It utilizes passive infrared (PIR) technology to detect motion at 360° from 8' to 20' mounting heights.

Occupancy sensor provides:

- » 360° coverage
- » Self-contained relay; no power pack needed
- » Adjustable time delay
- » Convenient test mode

ZL1 LED

- » Narrow housing (2-1/2" wide) for tight spaces
- » Unshielded optics provide maximum light output and efficiency

ZL2 LED

- » Larger housing (3-3/8" wide)
- » Choice of medium-diffuse or clear lens to provide glare control and protection from debris
- » Optional integrated emergency operation

» **Typical applications:** Retail aisle lighting • Retail shelving and industrial racks • Under canopy • Warehouse • Cold storage

FREQUENTLY ASKED QUESTIONS

» Do the Z Series LED striplights share any design elements with the original Z fluorescent striplight?

The ZL1 and ZL2 LED striplights have the same popular features as the Z fluorescent striplight. These features include a tool-less snap-on channel cover, rigid gripper back and robust row-alignment clips.

» How are the ZL1 and ZL2 LED striplights similar to each other?

ZL1 and ZL2 fixtures use the same basic electronics. Each contains a high-efficiency, Class 2 multi-volt driver that is connected to multiple integrated LED boards with a custom pluggable harness.

» What should I know about the LED boards?

Incredible color consistency is achieved by measuring each emitter in many ways during fabrication, including color temperature (CCT). This is called binning. Z Series LED striplights exceed ANSI standards by mixing emitters by their individual characteristics, not by simple binning. The result is superior uniformity. Also, the color rendering index (CRI) is 83 minimum.

» What standard features are built into the driver?

0-10V dimming down to 10% is standard, but a bi-level option is available.

» What are the differences between the ZL1 and ZL2 fixtures?

Size and optional features differentiate the ZL1 from the ZL2 striplight. ZL1 is based off of the Z fluorescent striplight. It has a narrow housing and the LED boards are unshielded for maximum efficiency. ZL2 has a wider housing, offers two lens options to diffuse the LEDs and is capable of integrated emergency operation.

» What mounting options are available?

Z Series LED striplights are compatible with our standard Z-spring, chain and hook, and aircraft cable and hook kits. You can also surface mount the units in any orientation.

» **Can I attach sensors to Z Series LED striplights?**

Certainly. Photocontrols and occupancy sensors are fully compatible with ZL1 and ZL2 products.

» **What is the ambient temperature operating range and environmental class?**

ZL1 and ZL2 fixtures are CSA Certified for dry and damp locations between -4°F (-20°C) and 86°F (30°C).

» **What is the expected service life?**

When used in environments between -4°F (-20°C) and 86°F (30°C) ambient, the LED LM-80 test data predicts an L70 of more than 100,000 hours and an L86 of 60,000 hours.

» **What is the standard warranty?**

There is a 5-year limited warranty. Full warranty terms are located at www.acuitybrands.com/CustomerResources/Terms_and_conditions.aspx.

» **What is the lumen output and power consumption?**

See table below.

Lumen Output/Wattage Comparison				
Z Series LED				Comparable Fluorescent
Length	ZL1 Lumens	ZL2 Lumens	Wattage	
46" or 48"	6000	4600	75	2-lamp 32W T8 or 28W T5
	2800	2300	32	1-lamp 32W T8 or 28W T5
24"	3000	2600	39	2-lamp 17W T8 or 15W T5
	1700	1400	21	1-lamp 17W T8 or 15W T5
